

Travel Time Reliability, Chicago Region, 2012

Notes: Data shows the planning time index for weekday travel in 2012. The planning time index is the ratio of the 95th percentile travel time to the free-flow travel time. The planning time index is a measure of travel time reliability.

The values displayed reflect the greater of the morning and afternoon peak period planning time indices. The morning peak is measured from 6 am to 9 am. The afternoon peak is measured from 4 pm to 7 pm. Free-flow travel time is measured from 8 pm to 5:30 am.
