Agency for Planning

About the Local Housing Profiles

The Local Housing Profiles are a curated set of housing data. The [Chicago Metropolitan Agency for Planning \(CMAP\)](#) provides these profiles for each of the 7 counties, 285 municipalities, and Chicago community areas (CCA) in northeastern Illinois.

Developed in partnership with the [Institute for Housing Studies at DePaul University \(IHS\)](#), the Local Housing Profiles can be used by residents, practitioners, planners, and policymakers to understand the latest data on a community's housing demand, supply, and affordability relative to regional trends. These reports include data from a number of sources, including socioeconomic, demographic, and housing unit data from the [American Community Survey \(ACS\)](#), and key housing market indicators generated from parcel-level administrative data and collected by the IHS via its [Data Clearinghouse](#).

If you or someone you know does not have safe and permanent housing, you can dial 211 or visit 211metrochicago.org to find help. Available across northeastern Illinois, 211 is a free, 24-hour service that connects residents to housing, food, utility payment assistance, healthcare, transportation, childcare, jobs, mental health, and more.

CMAP will update the Local Housing Profiles each year to reflect the most recent data available. The latest version is available on the CMAP website at cmap.is/local-housing-profiles. The data tables are also available on the [CMAP Data Hub](#). Please send questions to info@cmap.illinois.gov.

To improve these profiles in the future, CMAP wants to hear from you! Please take a quick [survey](#) to describe how you use this data and what you would like to see in future Local Housing Profiles.

User notes

Coverage

This snapshot is for New Lenox, which does *not* extend beyond the seven counties of northeastern Illinois. For communities that extend beyond the CMAP region (for example, Sandwich, IL, extends into DeKalb County), data available from the IHS Clearinghouse (including market data and data on new homebuyers) includes only the portion that is within the seven counties. Municipal-level data derived from the ACS includes the entire municipality.

Data availability

Data on homelessness are not included in these profiles due to data availability and consistency.

Data from the IHS Data Clearinghouse on residential sales, mortgages, and foreclosure activity are not available for geographies within Kendall County. Additionally, data on new homebuyers are not available for a small number of municipalities where the underlying data are not well represented at the municipal level. This snapshot is for New Lenox which is well represented by the analysis.

American Community Survey definitions

For data derived from the ACS, the Local Housing Profiles use terminology based on the [ACS subject definitions](#). Definitions for certain ACS-derived indicators are included below some data tables.

IHS Data Clearinghouse definitions

The data derived from the IHS Data Clearinghouse include aggregated, parcel-level administrative data on all single-family; condominium; two- to four-unit; five-or-more-unit building sales (from deed recordings); mortgage loans (from lien recordings); and new foreclosure filings (from circuit court filings). Loan level data are sourced from the [Home Mortgage Disclosure Act \(HMDA\)](#) for first-lien, owner-occupied, home purchase loans of one- to four-unit properties. Additional definitions for certain IHS-derived indicators are included below some data tables.

Margins of error

The ACS is a sample-based data product. Exercise caution when using data from low-population communities, as the margins of error are often large compared to the estimates. Indicators for this project were selected to minimize the impact of high margins of error where possible. For more details on sample sizes and ACS guidance, please refer to the [ACS sample size and data quality methodology](#). Data from the IHS Data Clearinghouse do not have margin of error concerns.

Mean of median values for ACS data

For aggregated geographies (CCAs and the CMAP region) where the underlying ACS tract-level data are reported as medians (like median gross rent or median income), a mean of median values is calculated and reported. For non-aggregated geographies (municipalities and counties), the median is reported.

Mean of median values for HMDA data

Home Mortgage Disclosure Act data are loan-level data that include only the census tract as the geographic indicator due to privacy concerns. Census tracts follow CCA, county, CMAP region, and some municipal boundaries. For areas where the tracts align, the median value for homebuyer income, purchase price, and loan amount are reported. However, most municipalities do not have boundaries that align with census tracts. For these communities, the IHS conducted geospatial and other analyses to identify tract relationships to CMAP region municipalities and estimate mean of median values. For more on this methodology, contact housingstudies@depaul.edu.

Comparing ACS data across past years

ACS five-year estimates are rolling samples that span a five-year period. When exploring trends, overlapping estimates should not be compared. The Census Bureau provides [guidance for comparing ACS data over time](#). Please contact CMAP at info@cmap.illinois.gov if you have additional questions.

Data for all households

These tables summarize the general demographic and social characteristics of all households in New Lenox. The data provide useful context about the residents of a community for indicators that cannot be separated by owner or renter households due to sample size issues.

Data for owner-occupied households and affordability for existing owners and new homebuyers

These tables highlight key economic characteristics for owner-occupied households in New Lenox. Specific tables on housing affordability show housing costs and cost-burden status for current homeowners, as well as loan characteristics for recent homebuyers. Data on the median property value and mortgage amount for recent home sales provide context on regional variation in housing costs. Additionally, data on a typical homebuyer's income can help stakeholders create programs for developing new homeowners.
